Phil, I'm not sure which semi-annual report you're looking at, but in the most recent one from February 2015, I see 7 sets of analytical reports on Table 6 and all 14 of the locations for Interceptor Wells (IW) on Figure 2. Please note that they're not required to sample each IW or necessarily each existing site Monitoring Well (MW) twice per year. Instead, for the purpose of tracking the contaminant plume they sampled the required subset of all the Oxy wells approved for semi-annual sampling. The purpose of the IWs is not for tracking the plume, but for other information; therefore, the frequency of data collection on those is less critical.

Good morning,

Couldn't sleep last night as the grim fact oxy does not want me involved in the environmental damage at the Wichita site. It has led to me determining the company is indeed a oxymoron. I take it by your silence the semi annual report is listed in its full glory with only my download reflecting four iw's in the analytical report and only six iw's on the site map.
